Surgery Guidelines

Items used by all physicians in reporting their services are presented in the **Introduction**. Some of the commonalities are repeated here for the convenience of those physicians referring to this section on **Surgery**. Other definitions and items unique to Surgery are also listed.

Physicians' Services

Physicians' services rendered in the office, home, or hospital, consultations, and other medical services are listed in the section entitled **Evaluation and Management Services** (99201-99499) found in the front of the book, beginning on page 10. "Special Services and Reports" (99000 series) is presented in the **Medicine** section.

CPT Surgical Package Definition

The services provided by the physician to any patient by their very nature are variable. The CPT codes that represent a readily identifiable surgical procedure thereby include, on a procedure-by-procedure basis, a variety of services. In defining the specific services "included" in a given CPT surgical code, the following services are always included in addition to the operation per se:

- Local infiltration, metacarpal/metatarsal/digital block or topical anesthesia
- Subsequent to the decision for surgery, one related Evaluation and Management (E/M) encounter on the date immediately prior to or on the date of procedure (including history and physical)
- Immediate postoperative care, including dictating operative notes, talking with the family and other physicians
- Writing orders
- Evaluating the patient in the postanesthesia recovery area
- Typical postoperative follow-up care

Follow-Up Care for Diagnostic Procedures

Follow-up care for diagnostic procedures (eg, endoscopy, arthroscopy, injection procedures for radiography) includes only that care related to recovery from the

diagnostic procedure itself. Care of the condition for which the diagnostic procedure was performed or of other concomitant conditions is not included and may be listed separately.

Follow-Up Care for Therapeutic Surgical Procedures

Follow-up care for therapeutic surgical procedures includes only that care which is usually a part of the surgical service. Complications, exacerbations, recurrence, or the presence of other diseases or injuries requiring additional services should be separately reported.

Materials Supplied by Physician

Supplies and materials provided by the physician (eg, sterile trays/drugs), over and above those usually included with the procedure(s) rendered are reported separately. List drugs, trays, supplies, and materials provided. Identify as 99070 or specific supply code.

Reporting More Than One Procedure/Service

When a physician performs more than one procedure/service on the same date, same session or during a post-operative period (subject to the "surgical package" concept), several CPT modifiers may apply (see Appendix A for definition).

Separate Procedure

Some of the procedures or services listed in the CPT codebook that are commonly carried out as an integral component of a total service or procedure have been identified by the inclusion of the term "separate procedure." The codes designated as "separate procedure" should not be reported in addition to the code for the total procedure or service of which it is considered an integral component.

However, when a procedure or service that is designated as a “separate procedure” is carried out independently or considered to be unrelated or distinct from other procedures/services provided at that time, it may be reported by itself, or in addition to other procedures/services by appending modifier 59 to the specific “separate procedure” code to indicate that the procedure is not considered to be a component of another procedure, but is a distinct, independent procedure. This may represent a different session, different procedure or surgery, different site or organ system, separate incision/excision, separate lesion, or separate injury (or area of injury in extensive injuries).

Unlisted Service or Procedure

A service or procedure may be provided that is not listed in this edition of the CPT codebook. When reporting such a service, the appropriate “Unlisted Procedure” code may be used to indicate the service, identifying it by “Special Report” as discussed in the section below. The “Unlisted Procedures” and accompanying codes for **Surgery** are as follows:

15999	Unlisted procedure, excision pressure ulcer	31899	Unlisted procedure, trachea, bronchi

69949	Unlisted procedure, inner ear
69979	Unlisted procedure, temporal bone, middle fossa approach

Special Report

A service that is rarely provided, unusual, variable, or new may require a special report. Pertinent information should include an adequate definition or description of the nature, extent, and need for the procedure, and the time, effort, and equipment necessary to provide the service.

Surgical Destruction

Surgical destruction is a part of a surgical procedure and different methods of destruction are not ordinarily listed separately unless the technique substantially alters the standard management of a problem or condition. Exceptions under special circumstances are provided for by separate code numbers.
